

PART TWO

# Antarctic Explorers:

Finding the South Pole

# Terra Nova Expedition

In 1910, Robert Scott set off on another expedition to reach the South Pole.

Scott

On the way to Antarctica, the ship encountered several problems.

1. Another explorer, Amundsen, had sent Scott a telegram. In it, he explained that he was also going to the South Pole!
2. The ship was struck by a storm. The crew had to use buckets to stop water from flooding in and sinking the ship.
3. The ship then ran into ice that it couldn't sail through. They were delayed by 20 days.

# Terra Nova Expedition

In 1911, the Terra Nova team set up a hut on Antarctica in a place that they named Cape Evans.

Amundsen

It was while doing scientific research that the team found out that the rival explorer, Amundsen, was camped on Antarctica too!

# Terra Nova Expedition

There was now a clear race to reach the South Pole.

Scott wrote in his diary that he was going to carry on as usual, ignoring Amundsen and his team.

# Terra Nova Expedition

In September, Scott set out to reach the South Pole.

He initially set out with a group of 12 men.

Along the way, some of the crew returned to base.

Eventually, it was a final team of five that completed the whole mission:

Scott, Wilson, Oates, Bowers and Evans

# Terra Nova Expedition

The Terra Nova team travelled over the ice and snow on foot, on skis, on motor sledges and on sledges pulled by both dogs and horses.

# Terra Nova Expedition

In 1912, the team finally achieved their incredible goal!

The team of five men reached the South Pole and planted their British flag.

There was just one problem...

# Amundsen Expedition

The Amundsen Expedition had already reached the South Pole!

Roald Amundsen, Helmer Hansen, Sverre Hassel and Oscar Wisting were the first people to ever reach the South Pole.

They had arrived on 14th December, 1911, and planted the Norwegian flag.

They had discovered a new route to the South Pole that took them only 57 days.

# Scott's Disappointment

It was over a month later, on 17 January, 1912, that Scott and his team reached the South Pole and discovered that the Norwegians had beaten them to it.

They were extremely disappointed.

After planting their flag, Scott's team headed for home.

# A Dangerous Mission

Scott's Terra Nova expedition ended in tragedy. No one survived the return journey.

Later that year, a search party set out to find Scott and the Terra Nova team. They put up a cross that now acts as a memorial to these brave explorers.

# Exploring Today

Scott and Amundsen both reached the South Pole more than 100 years ago.

How do you think expeditions in Antarctica might be different today?

What do we have in the world today that might help modern explorers?
